Praise for NPEC’s Public Policy Fellowship

The course was fascinating! Your presentations were very intriguing, highly organized, and detailed. Your delivery of the topics was very entertaining. As a result of the course, I feel more enlightened with respect to how US politicians make decisions with respect to Nuclear Policy based on past, present, and future events. The cohort participants were very friendly and professional, and I am thankful for the opportunity to participate.

Leslie Fields  
U.S. Nuclear Regulatory Commission

I enjoyed the discussion and learned quite a bit more about the process involved in setting, maintaining, and adapting nuclear policy. The information gleaned gives me a more well-rounded understanding of the “N” part of the CBRN mission I participate in at the DoD. I enjoyed the overview of the general topics and through the progression from design basics (for weapons and power systems) to policy and challenges were good.

Justin Hurt  
CBRN Operations, Munitions, and Materials, U.S. Army

The most useful topic for me was the overview of the NPT (instead of three pillars, one pillar with two ‘struts’) and future prospects (Japan, Korea mulling NPT exist?).

Evan Karlik  
U.S. Navy

I am really appreciative for your course, I have learned a lot through it. From my background, nuclear energy policy was much interesting. Moreover, lectures about improvement of military strategy and nuclear weapons are really helpful and broadened my horizon.

Keisuke Katori  
Asahi Shimbun

I didn't miss a single a seminar this fall and the experience was excellent. Being rather new to this field, it was exactly what I needed to excel professionally. What I liked best about the course were the slides, I thought they were really great. You were too (of course).

Alex Khauslender  
Headquarters, Department of the Army

I really enjoyed the class, events, and Mr. Sokolski's perspective on the issues facing us in nonproliferation. The things I learned in the class will be invaluable as I move forward with my career at DoD and will allow me to provide better policy recommendations to my principals. I have already recommended the fellowship to about 4 others who work within my office.

Cody Lauer  
Threat Reduction and Arms Control
I really enjoyed learning the history on a topic I had very little previous knowledge in. I think that you are a great speaker with a passion for teaching. I recently took a new position and work for DHS FEMA. I will definitely pass along to my colleagues the information regarding the NPEC fellowship for 2020.

Kevin Marshall  
FEMA, U.S. Department of Homeland Security

I thoroughly enjoyed your course and feel much better equipped in my role here at State. The sessions on the nuclear fuel cycle significantly improved my understanding, and I have already relied on the course material for my day-to-day work.

Gregory McLean  
U.S. Department of State

It was an honor to be a fellow of the NPEC’s Public Policy. During the course, my favorite part was learning about history and background of nuclear non-pro and arms control. Unfortunately, we are still facing same challenges as what happened long time ago. Because of that, knowing history and background was good lesson leaning for me.

Yukari Sekiguchi  
Embassy of Japan

I appreciate the course and your insights. I definitely took a lot out of it and would recommend this to colleagues. The high points of the course were historical analysis--particularly as it relates to the origins of the Cold War. I also enjoyed the section on treaties.

Rohin Sharma  
Defense Threat Reduction Agency

Thanks for a great class. I appreciated all of the classes and notes online which made it easier to review the class or make up one if we missed it.

Jared Stefani  
Graduate Student, Georgetown University

What I liked best:
· Absolutely the number one feature: provision of written materials that guided and provided context to classes. Importantly, these resources are INVALUABLE for reviewing when nuclear issues come up.
· In-depth lectures that developed foundation to properly understand public policy considerations.
· Instructor expertise – both experiential and theoretical.
· Commitment to provide all of the above in 11 separate classes, something I first thought would be difficult to complete. FYI – I attended all 11 classes – and am grateful that I did.
· Creation of a collegial atmosphere with a broad mix of congressional, executive, military, and international participants.
· Follow-up dinners and other events. It develops a commitment to stay on top of these issues – and a sense of enduring collegiality among the participants.
· Weekly updates and reminders.
· The brownies! (game changer)

Frank Tedeschi  
Office of Sen. Mike Rounds

The readings were very accessible and the quizzes provided the perfect means for review. I also found the lectures very engaging and informative; I learned more about nuclear policy in the span of 11 weeks than in my entire graduate experience.

Elizabeth Wright  
Research Trainee, Center for the Study of Weapons of Mass Destruction
I am happy to pass along my strong endorsement of the quality of your seminar. As I mentioned to you at the beginning
of the course, as a State Department Foreign Service Officer for 25 years and then in my current role as the Director for
Asian Affairs at the Department of Energy, I've engaged… w/o a grounded understanding of the substantive
underpinnings of the topic...So when you told me about your course, I jumped at the opportunity, and the course fulfilled
my expectations and needs. It also piqued my interest in further learning, a real credit to your presentation and passion for
the subject. I really appreciated your spot-on sense on how to design a course for busy government officials. You
identified the key topics we all need to understand. You presented the substance w/ the right balance of historical context,
current day policy relevance, and context on the differing perspectives of specific foreign governments and the different
agencies on the issue and the corresponding implications. You didn't load us up on required reading, but gave us terrific
bibliographies for those topics we wanted to delve into more on our own. I learned a lot, and the course will make me a
more thoughtful policy-maker when I engage on these issues w/ my NNSA and ISN colleagues.

Alan Yu
Director of Asian Affairs – Office of International Affairs, Department of Energy

I relish the opportunity to learn from an expert and it was great to get Henry's view on these topics. As a non-scientist (I
am an Operations Research Analyst by trade), I enjoyed and was able to understand the technical pieces due to the manner
in which he explained them.

Gordon Jaquith,
Office of the Secretary of Defense- Cost Assessment and Program Evaluation (CAPE) Office

I highly recommend adopting the NPEC course for those concerned with identifying problems and assessing potential
solutions in nuclear policy. The seminars by Henry Sokolski considerably improved my knowledge of topics related to
nuclear energy, weapons, and deterrence as well as my awareness of contemporary issues in this field. More so than for
other matters, in-depth familiarity with the technical characteristics is important for good nuclear control policies. Mr.
Sokolski's discussions addressed key aspects such as nuclear reactor design, nuclear weapon-making, and the history and
premises of the non-proliferation regime which I found particularly helpful. His comments regarding the Nonproliferation
Treaty (NPT), the IAEA, and safeguards/protocol was also very valuable in helping form a solid foundation with which to
evaluate problems and potential solutions for issues we confront today.

CDR Jack McKechnie
U.S. Navy

The NPEC course provides an excellent foundational knowledge on the history and technical specifications of nuclear
weapons, and policy implications of nuclear proliferation. For my own personal experience, the course was most valuable
in discussing comparisons between nuclear weapons and city busting bombing campaigns to put into perspective the
destructive force presented by nuclear weapons vice conventional weapons, the proliferation risk of different types and
components of nuclear power, and the history of use of nuclear weapons (including for “peaceful” purposes). I was also
given the opportunity to explore more in-depth the number of times that nuclear weapons were threatened to be used and
the near misses of their use; prior to this course, my exposure to these final two items was almost non-existent. This
course is incredibly valuable as a primer for understanding the very big issue that is nuclear proliferation.

Justin Dunnicliff

Mr. Sokolski happens to be one of the most entertaining individuals I've ever met. Thank you for letting me
attend the course.

Maggie Ybarra
The Washington Times
I had a wonderful time. It was a great learning experience that has benefitted me greatly. I hope to stay in touch and please pass my thanks to the entire NPEC staff for all your work to make this happen.

Rory Stanley  
Office of Sen. Maria Cantwell- Senate Committee on Energy and Natural Resources

Great content. It presented a well-informed view of the insecurities of the nuclear fuel cycle. This is a fellowship where I felt I actually learned something and wasn't simply lined up with political speakers.

Christopher O’Connor  
State Department - Bureau of International Security and Nonproliferation (ISN)

I appreciated the scope of the course. Because of the extensive topics it covers, I felt like I received a liberal arts education in the nuclear world. Not just nonproliferation regimes but also nuclear terrorism and nuclear economics and the science behind it all. As a policy influencer, that is a huge benefit; I can now pursue my own separate lines of inquiry with some steady footing. So much of life is understanding enough of a subject to begin to know how to ask the right questions, and now I can. That’s the crux of how I benefited and what the course provides.

Ryan Uyehara  
Office of Rep. Ami Bera

Although I have a fair amount of experience working on nonproliferation policy issues, the course provided me with a solid understanding and review of the basics of nuclear policy that is rarely found outside of a government setting. This background has already proven helpful in my interactions with interagency colleagues, and will no doubt better equip me as I play my small role in advancing U.S. nonproliferation objectives. As important, class sessions were a useful venue for informal discussions between branches of government on some of the most pressing security challenges facing the nation. Sadly, these opportunities are all too rare these days, given the press of business. All of which is to say thank you to NPEC and to you for the work you do educating those of us engaged in various levels and to various degrees in nuclear policy advising and implementation. I have no doubt that what we have learned helps us make more well-informed, smarter, better decisions.

Constantinos Nicolaidis  
East Asia Team Chief - Bureau of International Security & Nonproliferation, State Department

The fellowship was an overall great experience. I had limited experience with nonproliferation prior to the fellowship and feel that after the program I can confidently brief my boss on issues relating to nonproliferation.

Andrew Waldeck  
Office of Rep. Mike Rogers- Chairman of the Subcommittee on Strategic Forces

Henry is an invaluable resource to any staff member because of his experience in government and the private sector and I am constantly reaching out to him to pick his brain on issues of the day and policy decisions before the Congress. NPEC also brought together a variety of differing viewpoints and did not shy away from ideas that ran counter to his own.

Deborah Mazol  
Office of Rep. Andy Biggs

After more than a two decade long nuclear holiday on the part of the military, academics, and the American public, this country has finally rediscovered the importance of nuclear deterrence. In the second decade of the Twenty-First century the NPEC Public Policy Fellowship program is necessary to redress the lack of knowledge and understanding of nuclear deterrence. The task is to develop the next generation of strategic thinkers to deal with the challenges of deterrence in a multipolar regional threat environment. The NPEC, Public Policy Fellowship Program has made an excellent start in the development of the next generation of "strategic thinkers."

Dr. Willie Curtis  
Professor, U.S. Naval Academy
I found the course very useful because it provided a systematic overview of the development of nuclear technology (especially the military applications) and nuclear policy. I’m not sure whether that would be available from any other source. Moreover, the reading lists and other supplementary material allowed participants to go much deeper into subjects that they found particularly relevant to them.

Janne Jokinen
Embassy of Finland

Thank you for the opportunity to participate in the NPEC fellowship program. I’m not exaggerating when I say it was an absolutely rewarding experience. Is it indicative of a twisted mind that I attended every session (and both optional dinnertime discussions)? Perhaps. But I found the material and the lectures so compelling that I genuinely would have felt cheated to miss any of them...Sometimes it’s not easy to convince experts in the nuclear field to talk to a reporter. Already, I’m seeing a difference in their willingness to talk with me because, after some conversation, it becomes apparent to them that I’m not as clueless about the topic as they first imagined. That might not have been the case just a few months ago before I took your course.

Patrick Malone
Center for Public Integrity

The NPEC course on nuclear weapons and arms control was extremely useful for me. It gave valuable insights into the history of nuclear weapons and informed about the basics of nuclear technology and military strategies (the functioning of deterrence etc.). The level of detail was well calibrated: participants had to do at least the basic readings in order to be able to follow. On the other hand the course was not too technical.

Ruediger Bohn
German Embassy

The NPEC Fellowship offers novices and above a relaxed and engaging setting to expand their understanding of issues related to nuclear proliferation, including nuclear energy. The independent, recommended readings provide a range of views on key issues, present new ideas and introduce participants to some of the science behind all things nuclear. Classroom presentations and discussion ensure that participants are able to absorb and apply the principles and information learned. Throughout the course, there are opportunities to stretch from the specifics of a historical situation or nuclear application to thinking about the potential strategic impacts of nuclear weapons and nuclear energy.

Stacie Oliver
Senate Foreign Relations Committee – Staffer on Nuclear Policy Issues for Chairman Senator Corker

Thanks again for putting on this fellowship. I have a growing interest in the topics discussed and working to formalize my understanding and this class was a great first step.

Aaron Allen
Office of Rep. Juan Vargas - Committee on Foreign Affairs

The NPEC Public Policy Fellowship taught me to think about the future of nuclear weapons, ask the correct research questions, and frame my thinking in a way that allows for valuable analysis and objectivity. I gained an even deeper appreciation of nuclear weapons and nuclear energy history, but also recognized that there is no guarantee that what we have seen happen in the past will occur similarly in the future.

Stephanie Papa
Program and Research Administrator, John Hopkins SAIS
As a participant of the 2014/2015 NPEC Public Policy Fellowship, I gained incredible experience and expertise in the field of nuclear energy and non-proliferation. The knowledge I honed have [sic] proved to be tangible assets in my work and in the interactions I have had with US officials. Being able to understand but also to explain to my counterparts the magnitude and the implications of the issues we are facing has allowed me to develop and submit actionable recommendations and decisions. I am very grateful to you for your leadership and your commitment to the NPEC.

The NPEC Public Policy Fellowship is an experience I will strongly recommend to anyone involved in non-proliferation policy development. Your insightful expertise in this sector should be shared with the broadest audience.

Edouard Gheerbrant  
French Embassy

Given that I had minimal background in the study of nuclear energy & weapons, I found tremendous value in each of the NPEC fellowship lectures... A huge benefit of participating in these fellowships is talking with folks you would otherwise never meet—and you manage to gather a fairly wide distribution of government employees for the fellowship.

Lisa Harst  
Strategic Partnerships Associate, Children’s Advocacy Centers of Texas

In the wake of the Iran deal, NPEC’s Public Policy Fellowship changed my perspective of the history of proliferation and how this history has affected the world’s approach to conflict over time. I found the sessions on nuclear physics and bomb design particularly helpful and am confident that this understanding of the nuclear weaponization process has helped me to provide more in-depth, comprehensive analysis to my member on nuclear issues. If you want a competitive edge over other staffers on nuclear processing issues and weapons development, I highly recommend this course!

Katie McCabe  
Office of Sen. David Perdue- Committee on Foreign Relations

I very much enjoyed the course, I thought the material flowed naturally and gave me a foundation to critically examine news surrounding proliferation and nuclear energy in general… the portions that covered the physical science aspects were enlightening.

Ken Ballato  
Office of Rep. Patrick McHenry

This fellowship was enlightening and thought provoking. What I found to be most useful to me were the discussions on the mindset that led to the development of nuclear weapons, the evolution of weaponry and nuclear power, and the modern discussion on the politics of nuclear policy.

Sarah Nezamuddin  
Assistant to the Director for Political Affairs - Embassy of Saudi Arabia

I haven't seen any other syllabus this thorough and interesting on nuclear policy, online or off.

Dr. Colin Duek  
George Mason University

Your framing of the issues and their interconnection make a compelling case that slowly builds over the course of the 10 weeks. I've always been interested in learning "how" people think through problems, which can be just as informative as the material itself. With that in mind, the most valuable part of your lecture was your perspective and the long history you bring to the nonproliferation argument…

Kevin Kuhn  
Science Advisor - Environmental Protection Agency
Really enjoyed the class. For me, the most beneficial aspects were the technical descriptions of how to make a nuclear weapon and also the way you showed how destructive air power was in World War II without using nuclear weapons. My background gave me a good amount of insight into the politics surrounding nuclear weapons, but the technical descriptions of how one is actually made put the political theory in context.

*Ike Crews*
*Office of Rep. Pete Sessions*

I found the historical background reading, especially in the earlier part of the class, to be extremely helpful in setting the topic and pace of the class. I enjoyed the actual lectures and the fact that “taking notes” was actually discouraged so that one could listen attentively;

*Hagir Elawad*
*Director - Congressional Affairs Office, Embassy of the United Arab Emirates*

The NPEC Fellowship provided me with a deeper understanding of the technical aspects of nuclear proliferation, the history of and challenges to the international nonproliferation regime, and emerging threats such as the rise of new nuclear powers or the threat of nuclear terrorism. The knowledge and insights gained through Mr. Sokolski's seminars will be invaluable as I grapple with these issues in future diplomatic assignments. Thanks to Mr. Sokolski's seminars, I will approach these problems with a more nuanced grasp of their history and a realistic understanding of the prospects for their solution.

*Matthew Cenzer*
*U.S. Department of State - Bureau of International Security and Nonproliferation (ISN)*

I thoroughly enjoyed the course, and found it to be useful in providing a broader context for thinking about nuclear nonproliferation issues and particularly the potential proliferation implications of civil nuclear developments worldwide… I found your point of view to be a useful counter narrative that we in the government need to hear and consider. I also enjoyed having the opportunity to get to know some congressional staffers that follow these issues, as well as the Embassy participants.

*Seth Maddox*
*U.S. State Department - Bureau of International Security and Nonproliferation (ISN)*

I thoroughly enjoyed the course. As many seminars and classes as there are in DC on nuclear weapons, I have not seen any that explore the physics and mechanics behind nuclear weapon designs, the ease with which a state could transition from nuclear power to nuclear weapons, and the economics underlying nuclear energy like yours. More fundamentally, you offer insight and perspective that is compelling and does not fit in of the categories that seemingly all of the nuclear experts or nuclear scholars belong in… Outside of nuclear weapons issues, your course also reaffirmed to many of us why public service is important and how can we make it more meaningful.

*Robert Wilson*
*Senior Defense Analyst - Government Accountability Office*

I took Secretary William Perry’s class last year and after that I was confident that I knew quite a lot. Your class showed me that I knew so little! Your knowledge of information, theory and events is impressive, but the number of acquaintances and friendships you have in this area is amazing. As I map out what I want to cover in 2018 I will have better shovel to dig in on nuclear having taken your course and attended the side events you invited us to.

*Timothy Gardner*
*Correspondent, Reuters*
Thank you, Henry. Enjoyed the class. Glad you are trying to educate the Hill folks on these issues. It is an important mission. We will let people here at State ISN know about your course.

**Matt Brechwald**  
*Foreign Affairs Advisor, State Department, Bureau of International Security and Nonproliferation*

I found the online readings and weekly updates to be particularly helpful. You and your team do a great job translating technical subject matter in a way that can be useful to policy makers. As I mentioned previously to you and Leon, I manage a Task Force on Anti-terrorist financing and non-proliferation for my boss, and NPEC resources have been invaluable.

**Jaclyn Cahan**  
*Counsel, Office of Rep. Stephen Lynch*

Any civil servant working in nuclear matters can benefit immensely from the NPEC Fellowship. I haven’t seen anything else like it offered in the D.C. area and I would recommend it to anyone whose work touches on nuclear matters.

**Robert Grace**  
*Senior Analyst, Nuclear Weapons and Nonproliferation, U.S. Government Accountability Office*

Thank you for an engaging and thought-provoking experience, even if it may have interfered with my sleep at times.

**Harry W. Baumgarten**  
*Legislative Counsel, Office of Rep. Yvette D. Clarke*

I came into the fellowship with only a basic understanding of aspects of non-proliferation, so the course was EXACTLY what I needed to help me understand not only how nuclear weapons are made and used, So, from my perspective, the course did everything I had hoped it would do to prepare me to understand what I'm reading when different opinions are presented -- your class also invited me to challenge authority when it comes to accepted norms of deterrence, nuclear weapons, proliferation (and non-proliferation), and research more when something just doesn't seem right -- or seems too easy.

**CDR Daniel G. Straub**  
*U.S. Navy*

I got an in-depth view of the various angles and perspective on Non Proliferation. The study material provided with the course was worth reading. The group of students who were selected for the fellowship was from varied background and the networking among the students and sharing each others areas of work and views on the topic was also a knowledge gainer. There could had be no venue for the classes better than what you had blocked.

**Sumit Goswami**  
*Diplomat, Indian Embassy*

Thank you again for offering the fellowship. I was really impressed by your professional & technical credentials-- your ability to articulate your own experiences really lent your lectures much more credibly than someone with far less "real world" experiences, e.g. many nuke academics. Again, let me extend my appreciation for your time and access. It is a shame this course isn't mandated!

**Ryan West**  
*Legislative Correspondent, Office of Sen. Lisa Murkowski*
The course was, first and foremost, useful in connecting professional interested in the non-proliferation topic from various branches of the US Government, international partners, and private organizations. As I'm sure you are no stranger to the Hill, the operating environment is who you know is just as important as what you know. Secondly, the overview of the basic science, and basic components, involved with nuclear weapons was highly educational. Covering material refinement gave further background on the development/production chain involved with potential nuclear threats. While I am not an expert in nuclear science by any means, I do work to support USSOCOM funding, and USSOCOM is the overall DOD coordinator for the Counter-WMDs enterprise. Your course allowed me to gain some foundational knowledge in material and policy concerns, which I can apply in advocating for USSOCOM's CWMD funding requirements with Congress.

Lt. Col. Ming Xu  
Specialist in Legislative Affairs, U.S. Special Operations Command

I greatly appreciated the opportunity to participate in the NPEC fellowship. As a researcher/reporter for a Japanese news outlet in Washington, I frequently assist our correspondents in covering issues related to nuclear deterrence, nuclear proliferation, and nuclear power. Through this course, I feel I have gained a much greater familiarity with the historical background and controversies surrounding all of these areas. At the same time, the course has piqued my interest in several areas about which I plan to do further reading. This is facilitated by the fact that your course materials are so well footnoted.

Scott Stewart  
Researcher-Reporter, The Sankei Shimbun

- The variety of topics across the nuclear policy spectrum was very helpful for me in better understanding nuclear weapons as a whole.
- I enjoyed having a majority of the classes held at the Capitol.
- The various backgrounds of the other students provided me with multiple opportunities to network and engage in discussion with fellows who come from a different perspective of nuclear policy (Congress, think tank, etc.).
- I found the readings and the course lectures exceptional, given I enjoy the learning aspect of the fellowship and this experience helped me with determining my future for potentially pursuing a PhD.

Aaron Richards  
Policy Analyst, Scientific Applications International Corporation

Given my background as more or a generalist than any kind of specialist, I appreciated the course's historical context and your behind-the-scenes takes on what is largely glossed over in the headlines (the sins of my tribe). I wasn't up on the 19th and early 20th century theories of warfare, and was duly horrified to learn of how we've arrived at our current predicament. Also, given your technical expertise and seats at various policy tables, it was also crucial (even entertaining, at times) to learn that most of what I'd assumed was, essentially, wrong.

Your course has enriched my thinking and, I'm certain, will enhance my reporting on non-proliferation issues. I'm more at ease with the subject in general, and have a better understanding of its technical underpinnings.

Dorothy Parvaz  
Senior Producer for Human Rights Section, Aljazeera

I truly enjoyed the fellowship and your instruction. I thought the pace and content was just right, a methodical approach that gave the basics and then built on those. You made many complex subjects very easy to understand and I appreciate that. The course was useful in my current position and I'll recommend it to my colleagues.

LCDR Justin Nadolny  
Military Aide, Office of the Vice President of the United States
The course is tailored in a sequential and comprehensive manner, covering all aspects of the subject and wide spectrum of opinions. You were awesome in maintaining in an impartial approach to contentious issues. As a Pakistani diplomat I felt comfortable attending the course with participants of various backgrounds and associations. I benefited a great deal in understanding the political, economic, and scientific dimensions of nuclear policy. Thank you for the opportunity to take this course. I think this is a valuable contribution to promoting understanding and cooperation in this area.

Shah Khan  
First Secretary (Political), Embassy of Pakistan

From the course, I gained an understanding of the broad range of topics, issues and factors that affect nuclear non-proliferation policies and decisions. As a member of the military, it helps to understand the reasoning behind the policies that ultimately drive the tactical and operational decisions.

LTCR Eric Hui  
Military Federal Executive Fellow, RAND Corporation

I can say that as a Congressional staffer, I encounter a lot of undefined jargon and mushy policy concepts. It was refreshing to have an experience with Mr. Sokolski that was so rooted in science, economics, and history. For all the attention Iran, North Korea, and related non-proliferation topics receive in Congress, until I took this course, I was not aware of how much underlining knowledge I was missing. The lectures on the mechanics of enrichment, weaponization, and inspection were eye-opening. I hope that as new Members and staff come to the Hill, they too will have the opportunity to learn this material and apply it as they work to improve US efforts in this area.

Scott Cullinane  
Professional Staff Member, House Subcommittee on Europe, Eurasia, & Emerging Threats

Technically – I have a much better understanding of nuclear weapons, nuclear power plants, and reprocessing, the benefit being that I can follow proliferation/non-proliferation discussions much better now that I have more facts and don’t have to assume the one side of the argument I am hearing is totally accurate; I have had more in-depth discussions and gotten a lot more out of them due to the background information I learned in the seminar. Policy/Strategy – I better understand past decisions (good ones and bad ones) from the readings and lectures; however, if I were to rank what I learned more, I would say technical aspects over Policy/Strategy.

CAPT Budd Bergloff  
Federal Executive Fellow, Center for Strategic and Budgetary Assessments

I benefited from the course by having a setting to help keep me up to speed on nonproliferation issues. Additionally, I benefited by learning how to talk about nonproliferation issues from a broader lens than “warheads, missiles, and centrifuges,” which is all the general public seems to know or care about. Because of what I learned in the course, I can now better explain to a lay person the proliferation risks posed by Japan’s plutonium stockpile, or potentially selling reactors to Saudi Arabia. I learned about all the different aspects of nuclear weapons, fissile material production, and the role of nuclear power in nuclear weapons production that I never learned how to talk about it in a non-academic way. Now that problem has been addressed.

John Ashley  
Legislative Aide, Senate Committee on Veterans’ Affairs
I personally enjoyed the course and benefitted the most from both the historical background of proliferation and the introduction to the mechanics of nuclear weapons. The greater historical and strategic discussion on nuclear deterrence and proliferation issues would benefit the AF/DoD the most. Particularly, the first couple weekly lessons that reach back to WWII and the development of strategic bombing as a concept in warfare. I believe this historical context would be a useful background for the actual operators/personnel involved with our nuclear arsenal. Thanks again for the fellowship. It was very enjoyable.

Mike Gancio
Clerk, Strategic Forces subcommittee, House Armed Services Committee
